

Ruiyang Wang

Rancho Cucamonga, CA (909) 776-5362 wangruiyang1210@gmail.com <https://www.ruiyangwang.com/>

EDUCATION

University of California, Los Angeles (UCLA)

Master of Engineering, Artificial Intelligence

Los Angeles, CA

Fall 2026 – Summer 2027

- Focus: Machine Learning Systems, Computer Vision, Deep Learning

California State Polytechnic University, Pomona (Cal Poly Pomona)

Bachelor of Science, Computer Science, Minor in Data Science

Pomona, CA

Fall 2022 – Spring 2026

- President's Honor List (2023-2025), Dean's List (2023-2025)
- Engage Student Research Stipend (\$2,000), 2025-2026
-

EXPERIENCE

Cal Poly Pomona, Engage Program Research Fellow

Pomona, CA, August 2025 - May 2026

- Analyze how AI-generated linguistic features influence investor trust using logistic regression on 220 Crowdcube campaigns (UK, 2017-2018); examine impact on venture survival, bankruptcy, and acquisition outcomes using Python (Pandas, NumPy, scikit-learn)
- Identified international orientation signals associated with $2.7\times$ higher survival probability ($p = 0.018$); sustainability timing effects show ventures adopting positioning after raise achieve $8.6\times$ better survival; computed odds ratios and marginal effects (dy/dx)
- Designed and presented 48"×36" research poster at Cal Poly RSCA Conference (March 2026) to 100+ interdisciplinary attendees including CS, Business, and Economics faculty

NASA L'SPACE, Proposal Writing and Evaluation Experience, PI

Online, January 2026 - April 2026

- Selected as Principal Investigator from 50+ nationwide submissions; led 8-member team spanning 8 universities designing "Tumbling Prediction for Non-Cooperative Space Debris" mission; coordinated SME (Dr. Sumant Sharma, EraDrive CEO)
- Designed physics-informed ML architecture (Python, TensorFlow/Keras) achieving 67% accuracy improvement ($\leq 5^\circ$ vs. $\sim 15^\circ$ attitude error), $5\times$ faster operation, enabling autonomous capture planning

Cal Poly Pomona, Anomaly Detection Research Fellow

Pomona, CA, September 2024 - May 2025

- Built modular deep learning pipeline for network anomaly detection on 5.9M-sample CIC-IDS2017 dataset using PyTorch; parallelized forward-pass inference with MPI (mpi4py) across 32 processes on CPU cluster achieving $\sim 217\times$ speedup vs. single-process baseline
- Investigated vertical partitioning strategies and inter-process communication patterns to design scalable inference pipeline; implemented MPI collective operations (MPI_Bcast, MPI_Gather) in Python reducing communication overhead $\sim 40\%$
- Benchmarked runtime/memory across 4-64 processors validating Amdahl's Law (optimal: 32 cores); analyzed with Pandas/Matplotlib; ensured PyTorch parity via fixed seeds and scikit-learn preprocessing ($< 1e-6$ error)

LEADERSHIP

LoopBreakers Technical Team, Founder & Team Lead

April 2025 - Present

- Led 4-person team building full-stack wildfire alert AI agent (NASA FIRMS API + Google Gemini API + React/Django) in Bronco Hackathon 2025

Chinese Students and Scholars Association (CSSA), Vice President

January 2024 - Present

- Lead 300+ member organization; developed Python QR code registration system streamlining event check-ins for 500+ attendees across cultural programming and community events

SKILLS

- Programming: Python (Advanced), Java, JavaScript/TypeScript, C, Kotlin, SQL. HTML/CSS
- ML/AI: PyTorch, TensorFlow/Keras, scikit-learn, Transformers, LoRA/PEFT, LangChain
- Frameworks: React, Django, FastAPI, Flask, MPI/mpi4py
- Tools: Git/GitHub, Linux, Docker, Pandas, NumPy, Vercel
- Languages: English, Chinese (Mandarin) – Bilingual
